*Loans

Foreign words go through phonetic & morphological conversion.

Foreign	ki
y ɪ I Y e	i
ø œ ɜ æ	ɛ
ə ɵ Ɔ	ə
ɐ ƆE	a
ɑ ʌ ɔ ɒ	ɒ
ʌ ʊ ɯ ʉ	u

ṛ Ṛ ṛ ṛ Ḃ Ḃ Ḃ ḵ ḵ ḵ Ḷ Ḷ	l
ḍ ḍ ḍ	ʃ
q Ḡ x ḡ Ḥ	g
ḥ ḥ ḥ ḥ ḥ	θ
ṣ ṣ ṣ ḏ	s
ḥ Ḥ h h h w u	w

Syntax & Morphology

ki is made of 'sentences'.

Syntax

Sentences are made of three 'genres': noun, verb, adjective. Each is a 'word'. Each sentence has a fixed pattern:

... (noun) noun (adj) verb (adj) noun ...

- Genres in parenthesis are optional, opposed to regular, marked by morphology.
- Until period is reached, the pattern will repeat at the ...
- Optional genres extend while marked
- adj apply to the preceding word
- Multi- and Omni-Roots extend over multiple words, and generally must fit each word into syntax; Special Lexicon interrupt normal syntax

Morphology

Words are made of 'bits', and correspond to a digital 8-bit byte. The first 4 bits is a consonant, the second 4 bits is a vowel.

- The first bit is 1 for optional, otherwise 0.
The proceeding 7 bits constitute the 'root'
- Omni-Roots possess more complex morphology than Multi-Roots
- It is optional, but recommended, for speakers to double the length of a verb's vowel, and for writers to append a comma (,) after a verb

Semantics

*Genre Semantics

Whereby: (nouns) Subject, Object, Pronoun;
(other) Verb, Adjective.

Pattern	Semantics & Transivity
S...VOO...	S does V to O's ...which do V to O's...
SVPOVP	S does V to P who does V with O to P
SVOPV	S does V to O which P does V to

- pronoun ambiguity
- or SVOOV[by]SVOVO..., or OV[by]SVOOVVO..., or SVOPV (e.g. I like her me listen).

Noun Semantics

Contiguous nouns are of their proceeding;

e.g. cat bird = cat of bird | bird's cat

This rule permeates all multi-nouns;

e.g. person school = person of school | teacher

- Default article is definite

Miscellaneous

*Possession

thing my

*Imperative

- Made by stating the possible scenario (e.g. You clean the bath!).

Special Lexicon

- Interrupt regular syntax

Numerics

- Adjacent numbers are treated as a list, by default as a set of separate options

Protocol 1

First root is "s_numeric0", proceeded by a byte: first bit ('overflow') signifies a proceeding numeric byte. All non-overflow bits constitute a $N \times 7$ -bit binary value (N = amount of bytes).

Protocol 2.0 & 2.1

First root is "s_numeric1" for base10 (2.0), "s_numericA" for base16 (2.1), proceeded by a consonant: its value is the numeric's integer logarithm. The proceeding $\log(n)$ digits are composed of consonants & vowels by their numeric value.

- Pad with vowel <i> when necessary
- Expresses up to 16^{16}

Periodic Elements

First root is "o_element", then expressed as the number of protons using numeric protocol 2.0.

Kinship

First root is "o_kinship", then move through relations from subject to kin.

Kinship	Link	C
male	link	b
male	final	p
female	link	d
female	final	t
unknown	link	g
unknown	final	k

Kinship	V
partner	i
sibling	j
parent	e
child	a
friend	o
neighbour	u
stranger	q

Proper Nouns

Mono-Roots

- Adhere to normal syntax
- Root value is hexadecimal, regular
- Orthography is Latin word
- Includes frequent grammar roots
