### Rationale

**ki** is a constructed language, described oligosynthetic, with the primary goal of being the fastest-to-speak language in the world. To try and achieve this I have taken a digital-first approach, ensuring full use of phonological combination. I have taken care to keep the language easy-to-learn, with a small grammar. Always looking for feedback on lexicon!

There are numerous issues with this conlang, listed here for future reference:

- The lack of /m/ & /n/, the use of  $/\theta$ / &  $/\delta$ /
- Use of tones
- Strict word-order
- The need to memorise consonant/vowel numeric values
- The need to mentally alter consonants depending on word order (needing active one-word lookahead)
  - Could offload this onto vowel tone, but using the first phoneme aids immediate mental lexicon recall
- Lack of phonetic redundancy measures
- Extreme similarity between lexicon
- Script doesn't distinguish between C & V
- Underlying principle is digital inhumane

### Native Script

- One consonant & vowel to each native char
- For foreign words, an underdot can be used on vowels for human readability

### \*Foreign Words

Foreign words, to be used in ki, go through phonetic & morphological conversion. Though ki doesn't have many native phonemes, it makes exceptions for foreign ones.

Refer to *Proper Nouns & Foreign Words* to see how to express a full word in ki.

### Glossing

The English literal description of ki is called a "gloss". Apostrophes (') are prefixed to mark optional genres, double quotes (") are suffixed to Multi-/Omni-Roots, and commas (,) are suffixed to mark verbs.

## Alternate Representations

#### Morse Code Style (time + 2-bit)

- Dot is 1 length, dash is 2 length, letter seperator is 3 length
- Ordered by length
- Dot (.) is preferred over dash (-)
- L denotes length

#	Code	L									
0		1	4		3	8		4	С		5
1	-	2	5		3	9		4	D		5
2		2	6		4	Α		4	Ε		5
3		3	7		4	В		5	F		5

### Tap (time + 1-bit)

- Ordered by length
- L denotes length

#	Code	L									
0		2	4		4	8		4	С		5
1		3	5		4	9		4	D		5
2		3	6		5	Α		4	Ε		5

## Syntax & Morphology

ki is made of 'sentences'.

## Syntax

Sentences are made of three 'genres': <u>noun</u>, <u>verb</u>, <u>adjective</u>. Each is a 'word'. Each sentence has a fixed pattern:

### ... (noun) noun (adj) verb (adj) noun ...

- Genres in parenthesis are <u>optional</u>, opposed to <u>regular</u>, marked by morphology.
- Until <u>period</u> is reached, the pattern will repeat at the ...
- Optional genres extend while marked
- adj apply to the preceding word
- Multi- and Omni-Roots extend over multiple words, and generally must fit each word into syntax; Special Lexicon interrupt normal syntax
- Adjacent numerics are treated as a list, by default as a set of separate options

## Morphology

Words are made of 'bits', and correspond to a digital 8-bit byte. The first 4 bits is a consonant, the second 4 bits is a vowel.

- The first bit is 1 for optional, otherwise 0. The proceeding 7 bits constitute the 'root'
- Omni-Roots possess more complex morphology than Multi-Roots
- It is optional, but recommended, for speakers to double the length of a verb's vowel, and for writers to append a comma (,) after a verb
- It is optional, but recommended, to put a space between all words except roots in the same Multi-/Omni-Root

## Semantics

### \*Genre Semantics & Transitivity

Whereby: (nouns) <u>Subject</u>, <u>Object</u>, <u>Pronoun</u>; (other) <u>Verb</u>, <u>Adjective</u>.

Pattern	Semantics & Transitivity
SVOO	S does V to O's which do V to O's
SVPOVP.	S does V1 to P who does V2 with O to P
SVPO	S does V to P with O
SVPOV	S does V to P with O P does V to O
SVOOVP.	S does V1 to O's P does V2 to O's
SVOOVPOO	S does V1 to O1's P does V2 to O2's with O1's
PVObyVPO	P1 does V1 to O1 by P2 doing V2 to O2
SVOPV.	S does V1 to O which P does V2 to
SVOPVPOO	

Pattern	Semantics & Transitivity			
SVOGO	S does V to O1, O2 related			

- pronoun ambiguity
- or SVOOV[by]SVOVO..., or OV[by]SVOOVOO..., or SVOPV (e.g. I like her me listen).

#### \*Examples

PVObyVPO - I show, work 'good 'by speak, him it

I show good work by him saying about it

SVPOV - I determine 'needed I water eat "I must determine how to eat water"

SVOPV - I love 'really what I have "I really love what I have"

SVOGO - I make paper 'to book

#### Noun Semantics

Contiguous nouns are of their proceeding;

e.g. cat bird = cat of bird | bird's cat

This rule permeates all multi-nouns;

- e.g. person school = person of school | teacher
  - Default article is definite

#### \*Imperative

■ Made by stating the possible scenario (e.g. You clean the bath!).

## Special Lexicon

■ Interrupt regular syntax

### Numerics Bases 10 & 16

First root is "s\_num10" ( $\underline{b}$ ase-10, 'KN10') or "s\_num16" ( $\underline{b}$ ase-16, 'KN16'), proceeded by 4-bits: the <u>n</u>umeric's floored logarithm up to 0x7, then 0x7-15 for a negative number's absolute logarithm. The proceeding  $\log_b|n|$  digits are of vowels & consonants by their numeric value.

- Pad with <i> when necessary
- $\blacksquare$  Expresses -16<sup>7</sup> to 16<sup>7</sup>
- Two numerics together are an integer and its decimal

#### Periodic Elements

First root is "o\_element", then expressed as the number of protons using KN10. If number supplied is 0, it is the noun "element".

### Kinship

First root is "o\_kinship", then move through relations from subject to kin.

Kinship	Link	С
